INNOVATION FOR  
AGRICULTURE

# Modern agriculture modern equipment

Our this plough is the model which is preferred by modern farming countries due to its time fuel saving feature. In reversible ploughs number of nuts and bolts on mouldboard are less than on other ploughs. So it lasts longer.

As done in all our ploughs; reversible ploughs are made from boron steel, too. You can choose your plough's working width as you can do the same with its underframe clearance, working depth and inch.

# Open to innovation

Aydin Pulluk, as a producer, who knows the demand farmers are changing day by day according to product, tractor and type of soil, produces its good according to this and follows up the innovations.

Obtaining good product requires good plowing. To do this; and adjustment (inch, working depth – working width) should be easy. You can adjust this plough easily.

We offer high quality reversible ploughs at a reasonable price. In order to compete with EU, global farmers. We make it easy for our farmers to reach modern agricultural equipment by making the prices low.

Our reversible ploughs are easily adjusted to all the tractors from the lowest to highest hp. You can use our ploughs easily no matter the soil type or product type is.

You can easily find what you look for at Aydin Pulluk; who has got a big range of product. Even more, ploughs are produced in different types and inches according to demands for different tractor and type of soil.

This product provides non-stop ploughing with its spiral spring system. You can install new security system with one small spare part instead of changing whole system when there is deformation of working part.

AYDIN PULLUK  
AYDIN PULLUK

Under difficult conditions ; high efficiency and plogging is gaired by it spiral spring system. You can maket he plough bigger by adding +1 body or changing the distance between bodies or adjusting inside width.

*Quality  
hidden in  
details*

# Maximum productivity

In this model "non-welded body" used for the first time in Turkey is used without weakening the body. Maximum efficiency is obtained. Ploughing speed is increased according to plough's weight and better ploughing is obtained without tiring the tractor.

Our farmers can easily change spare parts when needed. Our profile frame convention ploughs are more long-lasting due to their less part numbers. The latest technology is used in this model in addition to its 3 share, slat mouldboards.

# *Sustainable agriculture*

There is no other machine can replace plough. None of applications could provide efficiency persistence. Ability to reach organic substances – which the soil needs – can be reached by ploughing.

It is the classic model which we have been producing since 1968. Its main properties are kept. It is newly designed with 3-share and slat mouldboards. It is also the most preferred model by neighbour countries farmers.

Our best-seller in Turkey is mouldboard plough. High type is in our product range. Distance between bodies is arranged optimum distance to obtain good ploughing. All parts touching soil are bar steel.

## *Classic and economic*

It's our the most economical model. Spare parts are standart. It has easy-changable parts and new model mouldboards which turns more soil. It is a model which you'll enjoy while preparing a good seed bed.

# Suitable for greenhouse productions

It is designed for farmers who working greenhouse (etc) areas. It is our smallest plough and suitable for 10-30 hp tractors.

*Water is life*

This is the model which prepares the way that brings together the product and water.

*Suitable for  
all tractors*

PULLUK**  
INNOVATION FOR FARMERS

Slat mouldboards  
easy ploughing on  
wet-humid soils by  
decreasing the pulling  
power of tractor. IT  
provides time Money  
saving.

*Customer satisfaction under all circumstances*

Our quality policy has been to canalize our investment according to the innovations in agriculture since 1968
